GREATER OTTAWA MESH ENTHUSIASTS · MESHCORE

Keeping the greater Ottawa area connected, no matter what happens

We are building a community radio network around Ottawa — one high spot at a time. If you have a **rooftop, barn/silo, tower, chimney, or high ground**, you already have the hardest part: **height**.

What it asks of you: Nothing. Really.

0	0	0	0
Cost	**Power**	**Upkeep**	**Wires / Wi-Fi**
We supply and install it.	Solar only. No hydro, no bill.	Nothing to do. We look after it.	No cable, no internet.

When the grid goes down, this stays up.

Phones and internet can fail in a storm or blackout. This runs on sunlight and batteries — so you can still reach neighbours and family.

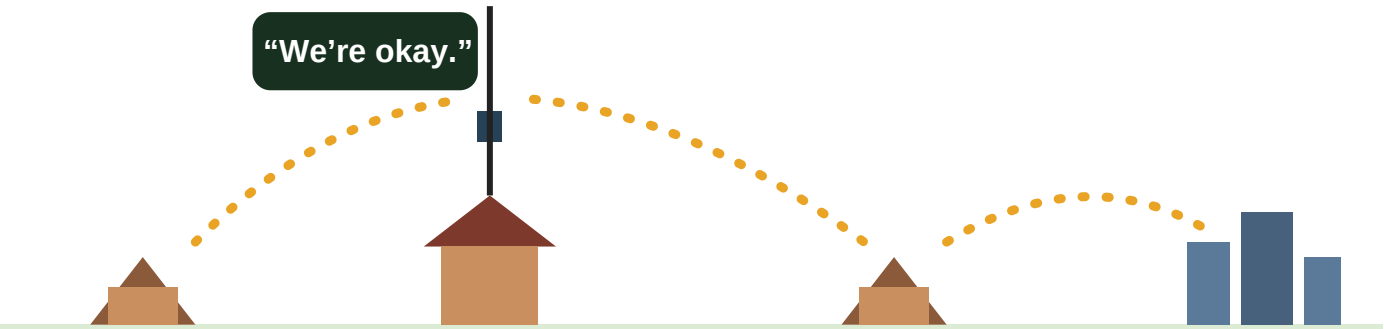

Your thank-you: a FREE companion device

Host a repeater and the **Greater Ottawa Mesh Enthusiasts** will offer you your own pocket-size companion radio if you're interested — so your household can send and receive messages on the network, anytime. No charge.

HOW IT WORKS

Text messages, hopping from place to place.

No cell towers. No internet. Just radio, passing a short message along until it arrives. **Note that this is text only, does not replace cell service, and is not a replacement for 911.**

Why height matters

Each repeater extends the network for **everyone around it** — neighbours, roads, and the next community.

THE BOX ITSELF

Smaller than you think.

Example unit: Seeed Studio SenseCAP P1-Pro, with its antenna and pole mounts.

Solar powered

Its own panel charges its own battery.

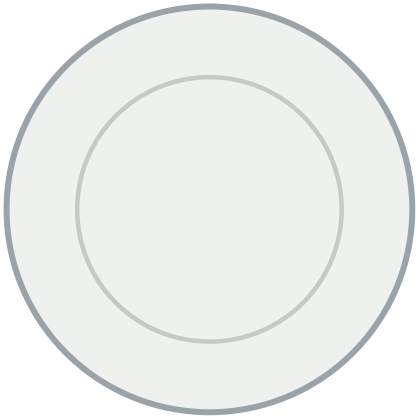

Weatherproof

Built to live outdoors, year-round.

Silent & still

No fan, no lights show, no moving parts to watch.

How big is it, really?

Dinner plate — 27 cm

P1-Pro — 20 x 19 cm

about 4 cm thick

Coffee mug

One small panel, high up. From the ground, most people will never notice it.

Interested? Just say the word — we will come out, look at your structure together, and handle the rest.
